DETAILED ACTION

Election/Restriction

Applicant's election without traverse of claims 1 and 20 in the reply filed on 08/18/08 is acknowledged. Therefore, claims 2-19 and 21-41 are withdrawn from further consideration by the examiner, 37 C.F.R. § 1.142(b). Accordingly, the nonelected claims 2-19 and 21-41 should be cancelled in the next response.

Specification

1. The abstract of the disclosure is objected to because the abstract needs to confine into a single paragraph. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claim 20 is objected to because of the following informalities:

In claim 20, line 2, "any one of claims 1 though 5" should change to –claim 1--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen (US 2005/0054391 A1).

Chen in figures 1-4 teaches an antenna device comprising a plurality of antennas 159 corresponding to different frequencies, respectively, and switching means 156 for switching between the antennas depending on a frequency [paragraph 0022].

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Fudaley, Strauch et al. and Selim are cited as of interested and illustrated a similar structure to an antenna device.
